WARPSimLab 4.5.1 — Bug Fix Release

This maintenance release fixes two GUI issues identified after the 4.5.0 release.

Fixes

- **Linux menus:** Fixed dropdown menus that remained open or became detached when the main application window was moved.
- **Display scaling:** Corrected automatic window sizing to maintain consistent proportions between window dimensions and text across different display resolutions and scaling settings.

No changes to the financial simulation engine or modeling functionality.

For a complete description of WARPSimLab 4.5 features, see the 4.5.0 release notes.
