WARPSimLab

Release Notes

Version 4.5.0

Release Date: October 24, 2026

Overview

Version 4.5.0 introduces adjustable GUI font scaling to improve readability and usability across different display sizes and resolutions, particularly on high-resolution monitors.

Changes and Improvements

- Added user-adjustable GUI font scaling.
- Improved scaling of text, labels, buttons, dialogs, and other interface elements.
- Improved GUI usability across different monitor sizes and display resolutions.
- Improved font scaling behavior on Windows and Linux.
- Corrected minor layout and scaling inconsistencies throughout the GUI.

Known Limitations

- Results are generated from simplified mathematical models. For example, the current model assumes that 100% of Social Security benefits are taxable. After-tax equity realized gains and dividends are combined and treated as qualified long-term capital gains.
- Simulations simplify financial markets and individual financial situations and do not reproduce every real-world condition.
- Output should not be interpreted as predictions or recommendations.

Future Development

- Add explicit future health-expense options.
- Add additional retirement withdrawal options.
- Add additional pension growth and adjustment options.

- Expand documentation.
